and Structural Iron Work.

ALSO MANUFACTURERS OF

THE PRINCE LAWN MOWER,
THE MONITOR LAWN MOWER.

ESTIMATES PROMPTLY FURNISHED ON ALL WORK.

SEND FOR CATALOGUE OF STRUCTURAL
IRON WORK AND CRESTING.

To Our Patrons.

WE take pleasure in presenting to our patrons this general catalogue and request that you read it carefully and notice the variety of work manufactured by us. We have tried to cover everything in our line, but as the subject is so large we may have overlooked some of your wants. If you do not find in this catalogue what you want, do not take it for granted that we do not make it.

Bear in mind that we make everything coming under the various heads, and request that particular attention be given to the artistic style of the work, the variety of the designs and the superior manner in which the mechanical portion of the work is done. We employ skilled mechanics and guarantee all our work. Our long experience in the fence business has enabled us to turn out the very best. Please notice by comparing with others that we make a greater variety of designs than any other company in the United States. Our superior facilities for turning out work, and buying material for cash, enable us to make lower prices than our competitors. We do not care to take our patrons time in reading over a long list of where work has been done, as many of our competitors do, but if any are desirous of such a list we will mail them one. A sample of our work can be seen in almost every town and city in the Union. Being located in the Champion City, noted for its large manufactories and having first-class railroad facilities, we are enabled to obtain the lowest of freight rates.

PAINTING.—All work receives one coat of Iron-Clad Paint, brown in color, before leaving the factory. Any other color will be charged extra.

Send for prices.

SETTING UP.—Our fence can be readily set up by anyone that can set post plumb, level and straight. No difficulty to make connections, all joints are positive. We ship in panels with line post, and support for center of panel separate. Furnish a clear and explicit diagram showing where each panel, post and gate goes.

Important to Our Customers.

Measuring.—First make a sketch of the ground, then start at corner or end; give the distance to center of first gate, thence to center of next gate, or to corner or end, as case may be. Our Walk Gates are three feet three inches between posts; Drive Gates, nine feet. If gates are required larger, they must be by special order.

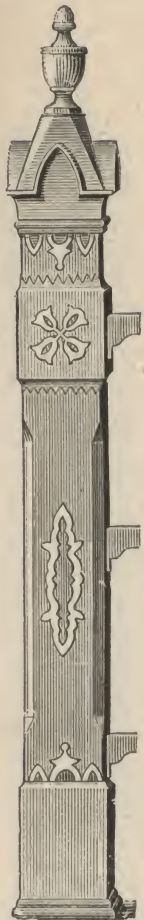

Setting the Fence.—We furnish a diagram showing where each post, gate and panel of fence is to be, and if our directions are followed, no mistakes will occur.

Recessing Gates.—Be particular at this point. Always measure recess sent you. Set Gate Posts back far enough to bring Recess Panels on line with front fence. Then by careful tamping around the bases, and proper fastening of the connections at gate posts and ends of panels, the work will be firm and substantially set.

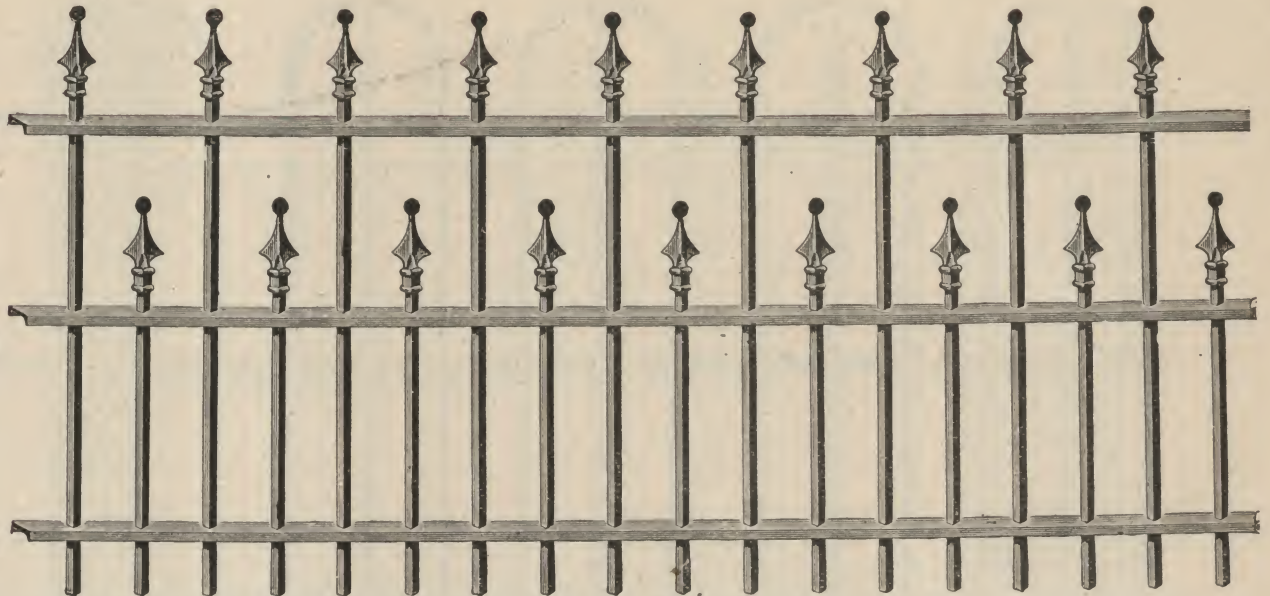

First.—Set end or corner posts, then stretch a line from one to the other. Find center of gate as measured, then set gate posts, using plumbing line, being very sure dirt is tamped well around bases. Stake off for line posts as per diagram, and by the use of a line the holes can be gauged to the same depth. Following this method, the bases are made the same level, which causes less trouble in "lining up" the fence. The Line Braces are adjustable—essential to the ease of placement. Our fences can be set on stone, in which case the necessary fittings will be sent.

Painting.—We give all our fence one coat of brown Iron-Clad paint before leaving the works, and charge two cents a foot for any other color.

No Extra Charge for Painting Brown.
